

Weekly report

Paper read

In the last week, three papers in the multivariate scientific visualization field have been read.

1. Visualization of multidimensional, Multivariate Volume Data Using Hardware-accelerated Non-photorealistic Rendering Techniques. Author: Kwan-Liu Ma et al.
2. Multivariate Volume Rendering. Author: Crawfis RA, 1996.
3. Volume Rendering Multivariate Data to Visualize Meteorological Simulations : a Case Study. Author : Joe kniss et al.

Besides, a paper of Ma about data compression has also been reviewed, without going into details.

Paper read will be kept going on.

Project

As Prof. Chen said, the job is not academic enough or suitable to be a work of a paper. Hence, it should be a skill exercise in the current time.

The technique report will be generated in two weeks, namely, as a replacement of the next weekly report or the one after it.

Back to lab

I have ordered the air ticket on 03/20/2013 and will appear in the lab in less than 10 days, most likely on 03/28/2012. I will give Prof. Chen a call when I back to China as well as I back to lab.
